

SELEKT™ User Guide:

SELEKT™

The SELEKT formulae are intended for delivery into the rumen, using a SELEKT cattle pump and drenching set.

1. In cases of mild dehydration in the clinically normal animal, use one sachet of Selekt Fresh Cow 500, Selekt Off Feed or Selekt Restore in 20 litres of warm water. If additional fluid therapy is required, use an additional 1-3 sachets of Selekt Restore in 20-60 L of water. Never use two sachets of Selekt Fresh Cow 500 or Selekt Off Feed and never use the two products together. **These products provide a full dose of 108 g of calcium: no additional calcium is required.**
2. To reduce excess acid in the rumen of a clinically normal animal, one sachet of Selekt Antacid should be used in 20 litres of warm water.
3. Selekt Glycerol Plus should be given with at least an equal volume of warm water and preferably with 10 times its own volume or more. It contributes no solute, so when used with a solution of another Selekt formula, no additional water is required.

	SELEKT Antacid	SELEKT Fresh Cow 500	SELEKT Off Feed	SELEKT Restore	SELEKT Glycerol Plus
Use for rumen buffering	✓				
Following Caesarian section		✓		✓	✓
For hydration				✓	
Inappetance in early lactation			✓		
Reduction in the risk of ketosis		✓			
Ketosis recuperation				✓ if fluid is required	✓
Following correction of left displacement of the abomasum			✓	✓	✓
Reduction in the risk of milk fever/hypocalcaemia and ketosis		✓
