

EasyStride™

agilis

Effective Topical Hoof Preparation

EasyStride is a topical hoof preparation that is intended for use solely to treat minor abnormalities of the surface structure of the hoof. EasyStride does not contain antibiotics, formaldehyde, copper sulphate or any other heavy metals.

Benefits:

- Effective hoof care disinfectant for your herd.
- Blue colour on hooves helps quickly identify which cows have been through bath.
- EasyStride will help establish an effective hoof bath routine helping to maintain optimal performance.
- Eco-friendly application solution - safer on the environment, cows and farmers.
- Prevents the spreading of infections.
- May also be used on sheep and goats.
- Can be used with foot bath or spraying application.

Active Ingredients:

Formic acid 10-30%

Lactic acid 10-30%

Available in a 20 litre drum.

Use as a 2% solution. 2L EasyStride per 100L of clean water.

ECO-FRIENDLY APPLICATION
SOLUTION PREVENTS
THE SPREADING OF
INFECTIONS.

Dosage and method of administration:

Do not use at full strength. This product must be diluted with water to be used in a hoof bath.

HOOF BATH APPLICATIONS:

1. For a 200L hoof bath mix thoroughly 4L of EasyStride with 196L of water (2% solution).
2. Hoof bath dilutions are based on 200 cow walk-throughs, after which it is recommended the hoof bath solution be discarded and replaced with fresh EasyStride hoof bath solution.
3. Use EasyStride 3 to 5 times per week for maintenance.
4. In challenging conditions or when experiencing hygiene problems, increase frequency of EasyStride up to 7 days per week.

If the capacity of the Hoof bath is unknown, use the following formula to calculate it: inside length (cm) x inside width (cm) x effective depth* (cm) ÷ 1000 = Litre capacity of hoof bath.

*The effective depth is the depth of hoof bath solution that is going to be used and not the measurement from the bottom to the lip of the bath.

SPRAY-ON APPLICATIONS:

1. Prepare a fresh solution of EasyStride, mixing 2ml of concentrated product with 98ml of clean water (2% solution).
2. Rinse hooves thoroughly with water to remove mud and manure.
3. Then saturate each hoof and heel of the cow with the solution.
4. Spray daily until favourable results are observed.
5. If the solution becomes contaminated, discard and prepare a fresh EasyStride solution.

Class 8 DG, (handlers certificate not required). Please see MSDS for more safety information.
